ASSIGNMENT 2 - BUILD PYTHON CODE
DAYANIDHI S 113119UG03018

ASSIGNMENT 2 - Build a python code, Assume u get temperature and humidity values (generated with random function to a variable) and write a condition to continuously detect alarm in case of high temperature.

```python
TEMP = int(input("Get the temperature value : "))
HUMIDITY = int(input("Get the humidity value : "))
if(TEMP>25) :
    print("The temperature value is high ")
elif(TEMP<25) :
    print("The temperature  value is low ")
elif(TEMP==25):
    print("The temperature  value is  correct ")
if(HUMIDITY >25) :
    print("The humidity value is high ")
elif(HUMIDITY <25) :
    print("The humidity  value is low ")
elif(HUMIDITY ==25):
    print("The humidity  value is  correct ")
```

OUTPUT 1 :
Get the temperature value : 12
Get the humidity value : 13
The temperature value is low
The humidity value is low
OUTPUT 2:
Get the temperature value : 26
Get the humidity value : 37
The temperature value is high
The humidity value is high
OUTPUT 3 :
Get the temperature value : 25
Get the humidity value : 25

The temperature value is correct
The humidity value is correct
OUTPUT 4 :
Get the temperature value : 26
Get the humidity value : 14
The temperature value is high
The humidity value is low
